# Exercises for "Formal Specification and Verification" Exercise sheet 8

We use the following abbreviations in LTL:

- The future diamond  $\Diamond \phi := \top \mathcal{U} \phi$
- The future box  $\Box \phi := \neg \Diamond \neg \phi$
- The release operator  $\phi \mathcal{R} \psi := \neg (\neg \phi \mathcal{U} \neg \psi)$

#### Exercise 8.1:

Let  $TS = (S, \rightarrow, L)$  be a transition system and let  $\pi = s_0 \rightarrow s_1 \rightarrow s_2 \rightarrow ...$  be a path in TS.

Prove:

 $\pi \models \phi \mathcal{R} \psi$  if and only if  $[(\forall m \geq 0 : \pi^m \models \psi) \text{ or } (\exists n \geq 0 : \pi^n \models \phi \text{ and } \forall k \leq n : \pi^k \models \psi)].$ 

Hint: You might need to use the fact that the following are equivalent:

- $\forall m \geq 0 \ (\pi^m \models \psi \text{ or } \exists n < m : \pi^n \models \phi)$
- $(\forall m \geq 0 : \pi^m \models \psi)$  or  $(\exists n \geq 0 : \pi^n \models \phi \text{ and } \forall k \leq n : \pi^k \models \psi)$

## Exercise 8.2:

Consider the following transition system:

Find an (infinite) path  $\pi$  in this transition system with  $\pi \models p\mathcal{U}q$ .

Find an (infinite) path  $\pi'$  in this transition system with  $\pi' \models \neg(p\mathcal{U}q)$ .

#### Exercise 8.3:

Let  $TS = (S, \to, L)$  be a transition system and let  $\pi = s_0 \to s_1 \to s_2 \to ...$  be a path in TS. Show that:

(1) 
$$\pi \models \bigcirc (\phi \rightarrow \psi) \rightarrow (\bigcirc \phi \rightarrow \bigcirc \psi)$$

(2) 
$$\pi \models \Box(\phi \rightarrow \psi) \rightarrow (\Box\phi \rightarrow \Box\psi)$$

(3) 
$$\pi \models \Box \phi \rightarrow \phi \land \bigcirc \Box \phi$$

(4) 
$$\pi \models \Box(\phi \rightarrow \bigcirc \phi) \rightarrow (\phi \rightarrow \Box \phi)$$

(5) 
$$\pi \models \phi \mathcal{U} \psi \rightarrow (\psi \lor (\phi \land \bigcirc (\phi \mathcal{U} \psi)))$$

#### Exercise 8.4:

Show that there exists no transition system  $TS = (S, \to, L)$  and no path  $\pi = s_0 \to s_1 \to s_2 \to ...$  in TS with  $\pi \models p \land (p \to \Box p) \land \Diamond \neg p$ .

#### Exercise 8.5:

Prove the following equivalences of LTL formulae:

- (1)  $\phi \mathcal{U} \phi \equiv \phi$
- (2)  $\bigcirc \Diamond \phi \equiv \Diamond \bigcirc \phi$
- (3)  $\phi \mathcal{U} \psi \equiv \psi \vee (\phi \wedge \bigcirc (\phi \mathcal{U} \psi))$  (unfolding of until)
- (4)  $\phi \mathcal{R} \psi \equiv (\psi \wedge \phi) \vee (\psi \wedge \bigcirc (\phi \mathcal{R} \psi))$  (unfolding of release)

*Hint:* For proving (4) you can use (3) and the definition of  $\mathcal{R}$ .

Please submit your solution until Sunday, December 16, 2018 at 17:00. Please do not forget to write your name on your solution.

Submission possibilities:

- By e-mail to sofronie@uni-koblenz.de with the keyword "Homework FSV" in the subject.
- Drop it in the box in front of Room B224.
